SY2017

Metering device wiring tester

It is used for wiring inspection and testing of high-voltage metering device which is new builded or in power-off state.

With only one time wiring, the connection, polarity and phase sequence of the secondary circuit of potential and current transformers can be completed tested.

It can measure the ratio of the transformer simultaneously.

It can also measure the secondary circuit impedance of PT and CT.

SY1002A

Single phase wathourmeter calibrator

Online measurement of voltage, current, phase, frequency, power, power factor, waveform harmonics and wathourmeter error calibration.

Two current input channels,I1 using clamp and I2 using direct-connect.

The built-in bluetooth module enables communication with a PC or intelligent terminal to realize measurement display, control, calibration, storage and other expansion functions of the instrument.

With bluetooth and USB interface, it can be connected to Android phones. The online app allows users to explore more functions.
